## Massachusetts Occupational Injuries and Illnesses

As Compiled by

The Massachusetts Division of Occupational Safety and the U.S. Department of Labor

## Wholesale and Retail Trade Industry 2000 Report

The Massachusetts Division of Occupational Safety, in cooperation with the U.S. Department of Labor, Bureau of Labor Statistics, has produced both national and state-specific data on private sector workplace injuries and illnesses. Annual surveys are collected from private establishments in each state and processed by a designated agency. During the 2000 survey cycle, 5,805 establishments were surveyed in Massachusetts 243,126 establishments were surveyed nationwide. following data have been selected to give a detailed look at the Wholesale and Retail Trade Industry in Massachusetts.

The State of Massachusetts recorded a population of 6,349,097 in the year 2000, and 2,866,344 of those people were employed in the private sector (408,760 people were also employed in the public sector). (Source: Massachusetts Division of Employment and

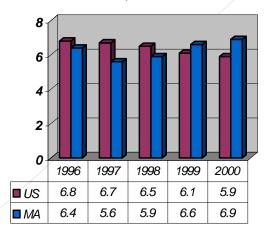

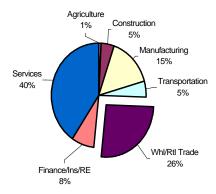

Chart 1: Percent employment in Massachusetts by industry, 2000

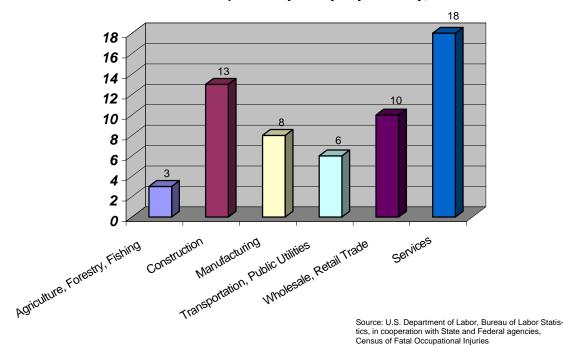

Employment is expressed as an annual average and is derived primarily from the BLS-State Covered Employment and Wages program.

Training, U.S. Department of Labor). Wholesale and Retail Trade made up 26% of the total number of private industry employees in Massachusetts in 2000, or 748,000 workers. The Services Industry made up the largest portion of employees in 2000 at 40%, or 1,160,400 workers; Agriculture, Forestry, and Fishing had 24,000; Construction had 130,100; Manufacturing 436,100; Transportation and Public Utilities 141,100; and Finance, Insurance, and Real Estate made up eight percent or 224,100 workers. (See Chart 1.)

Within the Wholesale and Retail Trade Industry in Massachusetts, the incidence rate<sup>1</sup> of occupational injuries and illnesses was 6.9 in the year 2000, or a total of 39,100 occupational injuries and illnesses as a whole. In comparison, the rate in 1999 was 6.6, in 1998 the rate was 5.9, in 1997 it was 5.6 and in 1996 it was 6.4. See Chart 2 for a comparison of Massachusetts to the National rates.

Chart 3: Number of fatal occupational injuries by major industry, 2000

The Wholesale and Retail Trade Industry suffered 10 occupational deaths in Massachusetts in the year 2000. Chart 3 details the major industries in Massachusetts and the number of fatalities that occurred in each. In 2000, the Agriculture, Forestry, and Fishing Industry had three fatal

occupational injuries; Construction had 13; Manufacturing, eight; Transportation and Public Utilities, six; and Services had 18. The major causes of occupational deaths in Massachusetts were falls, homicides, and transportation accidents.

In the year 2000, Wholesale and Retail Trade Industry workers suffered 16,475 occupational injuries and illnesses involving days away from work. Chart 4 shows the distribution of the lost time injury cases by the nature of the injury or illness. Of the total, 8,500 injuries or illnesses were strains or sprains, 1,607 were bruises or contusions, 1,406 were cuts or lacerations, and 1,253 were fractures. (See Chart 4 for all other natures of injury and illness and the numbers of workers they represent.)

Chart 4: Number of nonfatal injuries and illnesses involving days away from work by nature of injury or illness, Wholesale and Retail Trade, 2000

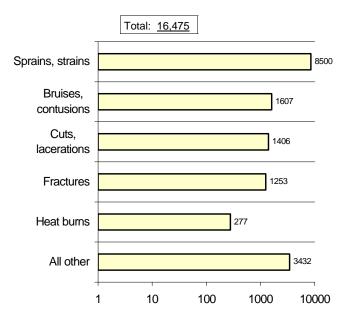

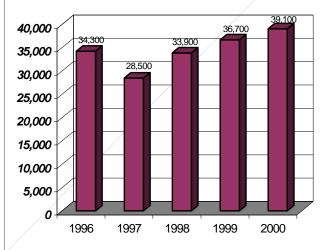

Chart 5 details the total numbers of nonfatal injuries and illnesses for the years 1996 – 2000. These data indicate a steady increase in the number of injuries and illnesses within the Wholesale and Retail Trade Industry in Massachusetts from 1997-2000. 39,100 workers suffered occupational injuries or illnesses in 2000, 36,700 in 1999, 33,900 in 1998, 28,500 in 1997, and 34,300 in 1996. Of the 39,100 injuries and illnesses in 2000, most were the result of being struck by or against an object, overexertion, falls, or transportation accidents.

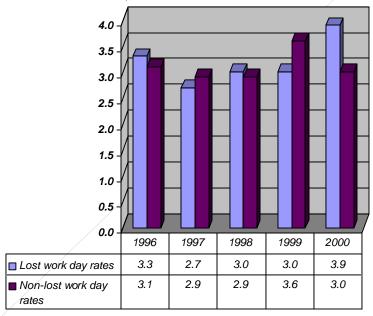

Of the 39,100 total reportable cases of occupational injury and illness in 2000, 22,200 of these cases resulted in days away from work or restricted workdays, or both, while about 16,900 injuries were cases

Chart 5: Total number of nonfatal injuries and illnesses, Wholesale and Retail Trade, 1996-2000

without lost work days. Days away from work are counted if the employee misses any days

Chart 6: Lost work day v. Non-lost work day incidence rates1 of nonfatal injuries and illnesses (per 100 full time workers), Wholesale and Retail Trade, 1996-2000

AFTER the initial day of the occurrence of the injury or diagnosis of illness. Restricted work time is defined as light duty or a temporary transfer of duties due to an occupational injury or illness. Non-lost workday cases are those cases in which the employee is injured but returns the next day to work with no restrictions. The incidence rate<sup>1</sup> in 2000 of lost workday cases per 100 full time workers was 3.9. This represents an increase in the rate from each of the four prior years. The incidence rate of nonlost workday cases was 3.0 in 2000, which represents a decrease from 1999, but a slight increase from the two prior years. (See Chart 6.)

N = number of injuries and illnesses

SOURCE: Bureau of Labor Statistics, U.S. Department of Labor, Survey of Occupational Injuries and Illnesses, in cooperation with participating State agencies.

<sup>&</sup>lt;sup>1</sup> Incidence rates represent the number of injuries and illnesses per 100 full-time NOTE: Because of rounding, components may not add to totals. workers and were calculated as: (N/EH) x 200,000 where

EH = total hours worked by all employees during the calendar year. 200,000 = base for 100 equivalent full-time workers (working 40 hours per week, 50 weeks per year).
